

koolNECK™

Horse Riding • Gardening • Construction • Exercise

The **koolNECK™** is used to cool the back of the neck to reduce your body's temperature. The source of the cooling is from our **unique phase-change powdered koolPAK™**, which fits into the koolNECK™'s pocket. The koolPAK™'s non-icy substance has a surface temperature of 50-75°, while the center remains frozen. This allows it to remain cool for an extended amount of time.

Instructions

1. Place the koolPAK™ in your freezer for 3-4 hours. This allows the koolPAK™'s unique phase-change material to stay cool for an extended period of time.
2. Place the koolPAK™ into your koolNECK™, and wrap it around your neck so that the koolPAK™ lays over the back of your neck.
3. Tie the ends together to the tightness that best fits you.
4. Apply for approximately 60-90 minutes and then remove or replace it with a new koolPAK™.
5. Keep the unique powdered koolPAK™ in a freezer between uses.
6. To clean, wash the koolPAK™ with lukewarm water and then dry with a clean towel.
7. The koolNECK™ is machine washable.

Precautions

Avoid breathing contents of the bag if packaging breaks. If packaging is punctured, discard. Upon contact with eyes, flush with water.
